

CLAUDE COWORK CERTIFICATION

Build Skills That Work. Then Make Them Yours.

Shankha Dey

Senior Director PM, Salesforce Data, Search, AI
Fmr. Microsoft Bing AI Platform, Cortana/Copilot, AI Search

Jason P. Yoong

Co-Founder & COO | former Amazon, VP at Dentsu, Startup
(\$8M seed) | Advisory Board Member

no code · real workflows · evals built in

WHO'S IN THE ROOM

Today's cohort

Every function. Every industry. One thing in common.

Google

Microsoft

Meta

Walmart

UBS

Boomi

Capgemini

Woven by Toyota

Warner Bros Discovery

Child Mind Institute

What you all have in common: a lot of manual work that AI should already be doing.

BLOCK 1

Chat → Cowork → Routines

The three modes, what each is for

Same task. Different methods

NEW

CHAT

You ask
It answers
You do the work

Laptop open
You initiate every time

COWORK

You schedule
It runs on your laptop
Results waiting for you

Laptop needs to stay on
Runs at 6am without you

ROUTINES

You schedule
It runs in the cloud
Results waiting for you

Laptop off
Runs at 6am without you

<https://pe.app/a/questions/935288942>

BLOCK 2

Your Context System

The three files that make everything personal and helps you evaluate quality

One-time setup of 3 files

about-me.md

WHO YOU ARE

Your role, industry, topics to follow, current priorities. The morning briefing reads this to personalise your news.

brand-voice.md

HOW YOU WRITE

Your tone, sentence length, phrases you use, phrases you never use. Paste real samples from your own writing — don't skip this.

working-style.md

HOW COWORK BEHAVES

Your safety rules, how you want tasks handled, where outputs go. Pre-filled with defaults that protect you.

EVAL MOMENT These files are your first eval — does Cowork actually know enough about you to produce relevant output? Open yours now and check.

BLOCK 3

Three Skills Running Live

Morning briefing · Meeting prep · Document drafter

Run each one. Then ask three questions.

01

MORNING BRIEFING

`/morning-briefing`

Reads email + calendar + industry news. Produces a prioritised daily brief.

After running: Was the industry news actually relevant to your work?

02

MEETING PREP

`/meeting-prep [person] [company] [goal]`

Researches the person, company, and context. Produces a prep brief in 3 minutes.

After running: Would you add anything you already knew that it missed?

03

DOCUMENT DRAFTER

`/document-drafter [bullet points]`

Turns your rough notes into a polished document in your voice.

After running: Does it sound like you wrote it? Find one phrase you'd never use.

BLOCK 4

Deepdive into Skills and Evals

Study a Skill file. Verify it is working. Fix what is not

Anatomy of a Skill file

01 END STATE

What done looks like. Not what to do — what the finished result is.

Most people describe the process. Describe the result instead.

02 CONTEXT

What Claude can't see or infer from the files.

e.g. 'These are rough notes, not final decisions.'

03 CONSTRAINTS

What it must never do.

Always include: do not delete anything unless I explicitly ask.

04 OUTPUT

What file to create and where to save it.

e.g. 'Save as q1-update.docx in Documents'

3 questions for everything you build

01

DETERMINISTIC

Did the right thing happen?

Check the output format you defined. Did every required element appear? This is a yes/no check.

02

JUDGMENT

Is the quality actually good?

Would a smart colleague who knows your job look at this and think it's good? Not 'does it look right' — is it actually right?

03

PERSONAL

Does it sound or feel like you?

For any writing output — find one phrase you'd never say. That phrase is your next iteration.

BLOCK 5

Improve a Skill Live

One of the skills - before and after

The iteration loop to improve AI output

BEFORE — VERSION A

Output ran.
It looks professional.
But it has a phrase you'd never say.
Question 3 failed.

AFTER — VERSION B

Same Skill.
One line added to context files
Run again.
Phrase is gone. Question 3 passes.

EVAL MOMENT The gap you found after your break — that's what we're fixing now. One change. Re-run. Does the gap close? That's a real improvement signal.

TRY Run document drafter V1 → apply three questions → find the gap → add one line to brand-voice.md → run V2 → compare

Most people run an automation once, accept the output, and never come back to it. That's the difference between AI that gets better and AI that stays mediocre.

BLOCK 6

Chaining Skills

One instruction. Multiple outcomes

Skills chain

Set this chain once as a new scheduled job. It runs every morning at 6am

How to chain: Type: "Run morning-briefing, then for each meeting run meeting-prep, then draft the agenda doc for each one. Save everything in a single doc file under Documents"

EVAL MOMENT The eval of a chain: does every step produce what the next step needs? Run it once manually before scheduling it as a Routine.

15-MINUTE BREAK

BLOCK 7

The Skills Ecosystem

You don't have to build everything from scratch

1.2M+ skills ecosystem

github.com/anthropics/skills

Official Anthropic Skills. Ranges from creative to enterprise workflows. Apache 2.0 open source. Start here.

skillsmp.com

1.2M+ skills marketplace. Filter by occupation, role, popularity. Compatible with Cowork and Claude Code.

github.com/ComposioHQ/awesome-claude-skills

Curated list organized by category and workflow type. Best for non-technical users finding role-specific skills.

github.com/shankhadey/mavencourseassets

YOUR course skills. Everything we built today. Morning briefing, meeting prep, LinkedIn tools, Reddit skills, KB audit, more

EVAL MOMENT Before installing any third-party Skill: run it once, apply the three questions. Not all Skills are good. The eval framework works here too.

BLOCK 9

Build Your Custom Skill.

50 minutes · Your most repetitive task → a running Skill → three questions → live feedback

4 questions before you build

01 END STATE

What does the finished output look like? Be specific. Name the file, the format, where it saves.

02 CONTEXT

What can't Cowork see or infer? Your role, your audience, background information it needs.

03 CONSTRAINTS

What must it never do? (Always include: never delete anything without explicit permission.)

04 OUTPUT

What file to create and where to save it. e.g. 'Save as weekly-status.doc in Documents.'

SAY The most important question is number 2: what would a wrong output look like that still appears complete? Write that down before you run anything.

Check all three questions

01

DETERMINISTIC

Did the right thing happen?

Check off every element your output format required. Did each one appear? Missing element = gap to fix in working-style.md

02

JUDGMENT

Is the quality actually good?

Would a smart colleague who knows your job look at this and think it's genuinely useful? Not just plausible. If not, add strict instructions in about-me.md

03

PERSONAL

Does it sound or feel like you?

For writing output: find one phrase you'd never say. That phrase goes into brand-voice.md. Run again.

Reflector: A separate process that evaluates and improves the Doer's output

Better outputs with Reflector

Same skill file. Different role. Better results.

WHAT YOU BUILT TODAY

- A morning briefing running on your real data
 - Meeting prep that knows your calendar
 - Documents drafted in your voice
 - One custom Skill for your most repetitive task
 - A 3-question eval framework you can apply to anything
 - One documented gap you found and fixed
-

What to do next week: run your Skill every day. Every time it produces something that doesn't feel right — that's your eval. One line added. Run again. That's the loop.

TRY AT HOME

BLOCK 8

Claude Computer Use: LinkedIn

When there's no connector: Claude takes the wheel

No connector. No problem.

The rule: If a connector exists → use it. If not → Computer Use.

LinkedIn has no official Cowork connector. Computer Use opens a browser and navigates LinkedIn directly:

1 Opens LinkedIn in browser

2 Navigates to your feed

3 Finds posts to engage with

4 Clicks the comment field

5 Types the drafted comment

6 Pauses — YOU hit Enter

Step 6 is the compliance model. Computer Use drafts and positions. You post. Always.
